FLEET MANAGEMENT

AMD // Intel

Manage your fleet with confidence, whichever processor you choose

Device refreshes happen in waves: upgrades for this team here, a new hire's laptop there. IT needs every one of them to deliver the same control and visibility—regardless of processor.

Same portal, same workflow

Deploy updates, apps, and patches without extra time, effort, or logins for either AMD or Intel® processor-powered Dell PCs.

See the proof »

Built-in out-of-band (OOB) management, either way

Both platforms passed four for four on core OOB management capabilities.

See the proof »

OOB management enables IT to remotely and securely manage a PC whose operating system is down.

With AMD PRO technologies, you gain:[1]

Security at the hardware, OS, and system level

Streamlined deployment and management

Leverage the same management workflows and the same OOB capabilities.

AMD PRO delivers both.
